Claim Objections

1. Claims 11-15 are objected to because of the following informalities: in claim 11, last line, "the source node transmits the selected" should be --the source node transmits information associated with the selected-- (as stated in claim 1, line 11). Appropriate correction is required.
2. Claim 18 is objected to because of the following informalities: "on an maximum time" should be --on a maximum time--. Appropriate correction is required.

Specification

3. The abstract of the disclosure is objected to because it is longer than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 8 is rejected under 35 U.S.C. 102(e) as being anticipated by Karaoguz et al. (US 2002/0059434).

4. Karagoguz discloses a method of selecting a routing protocol for use in a node in an ad hoc network (abstract, all lines). The method comprises the steps of receiving a first message identifying a first routing protocol (Figure 10, steps 176-178), receiving a second message

Art Unit: 2666

identifying a second routing protocol (steps 190-192), and selecting one of the first and second routing protocols for use in the node (steps 180-182 and 194).

Allowable Subject Matter

5. Claims 1-7, 16-17 and 19-20 are allowed.
6. Claims 9-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. Claims 11-15 and 18 would be allowable if rewritten to overcome the claim objections above.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Callon et al. (US 5,251,205; Figure 5B), Awater et al. (US 2001/0010689; para. 54), and Ayyagari et al. (US 2002/0176366; Figures 5-8) each discloses selecting a routing protocol among several available routing protocols. Mattisson et al. (US 2002/0012381; para. 31) discloses a transmitted request to change communication parameters in a wireless environment.
